

Index

F. S. G. J. HAEDO
Invad. N° 21922

A

Acceleration phase, 83, 111
Alighting proportion, 94, 109
All-stop, 109
Approximation error, 35, 71
Arrival event, 135
Arrival rates change event, 135
Arrival time, 83
Automatic train operation, 3, 7
Automatic train protection, 3, 8
Automatic train supervision, 3, 8

B

Beijing Yizhuang subway line, 68, 95, 122
Bi-level approach, 109, 176
Braking distance, 11
Braking force, 8, 25
Branch-and-bound, 89, 175
Bus transit system, 162

C

Ceiling function, 55
Coasting phase, 12, 85
Computation time, 41, 67, 100, 129
Computational efficiency, 14, 161
Control performance, 100
Crew scheduling, 2, 14
Curve resistance, 25

D

Deceleration phase, 83, 111
Demand analysis, 2, 14

Departure event, 135
Departure time, 83
Distributed optimization, 61
Driver assistance, 3, 9
Dwell time, 17, 83
Dynamic programming, 9

E

Energy consumption, 3, 9, 23, 27, 87
Energy saving, 3, 12
Event-driven model, 135

F

Fixed block signaling, 2, 9, 55
Following train, 11, 53

G

Genetic algorithm, 12, 150, 171
Grade profile, 13
Greedy approach, 60

H

Headway, 17, 55, 58, 113
Heaviside function, 31
Hierarchical control, 1
High-level optimization, 119

I

Integer programming, 16
Interlocking systems, 2

In-vehicle time, 87
 Iterative convex programming, 92, 173

K

Kinetic energy, 12, 28, 34, 60

L

Leading train, 11, 13, 53
 Least-squares optimization, 35
 Legendre-Gauss-Lobatto point, 30, 164
 Limited bi-level approach, 109, 120
 Line planning, 2, 14
 Line resistance, 26
 Lower control level, 26
 Lower level control, 83
 Low-level optimization, 119

M

Max-plus algebra, 84
 Mixed integer linear programming, 39, 60, 91, 175
 Mixed integer nonlinear programming, 90, 176
 Mixed logical dynamic model, 34
 Mode vector constraint, 67
 Moving block signaling, 2, 10, 57
 Multi-car elevator system, 162
 Multi-parametric quadratic programming, 23
 Multiple trains, 7, 53
 Multi-start optimization, 89, 119

N

Nonlinear programming, 81, 135, 167

O

OD-dependent, 15, 109
 OD-independent, 15, 81
 Open track, 59
 Operation cost, 16
 Optimal control, 7

P

Passenger arrival rate, 83, 135
 Passenger demand, 3, 15, 109
 Passenger flow, 17, 135
 Passenger satisfaction, 18
 Passenger transfer, 5, 16, 135
 Path constraints, 31

Pattern search, 89, 119, 170
 Piecewise affine, 13, 35, 66, 119
 Pseudospectral method, 30, 60, 163
 Punctuality, 3, 12

R

Railway operation, 1, 9
 Reaction time, 11, 58
 Reference trajectory, 9
 Riding comfort, 8, 23, 27
 Rolling horizon, 30, 60, 89, 118
 Rolling stock planning, 2, 14
 Rotating mass factor, 24
 Running time, 3, 17, 71, 83, 112, 142

S

Safety margin, 11, 58
 Sequential quadratic programming, 90, 119, 169
 Signaling system, 2, 7, 26, 53
 Simultaneous approach, 61
 Speed code, 10, 55
 Speed holding phase, 83, 111
 Speed limit, 8, 28
 Speed profile, 1, 7, 26
 Splitting rate, 135
 Stop-skipping, 17, 93, 109

T

Terminal station, 17, 109, 136
 Threshold method, 120
 Timetable, 3, 14, 27, 29, 82
 Traction force, 24
 Train control, 2, 7
 Train schedule, 3, 16
 Train scheduling, 2, 14, 83, 109
 Trajectory planning, 1, 7, 23, 53
 Trapezoidal integration, 35
 Travel time, 87, 117
 Tunnel resistance, 25

U

Urban rail network, 135
 Urban rail transit, 4, 7, 81, 135
 Urban rail transit network, 5

W

Waiting time, 16, 18, 87
 Walking time, 135, 141
