

INDEX

- Absolute ceiling, definition of, 161
Acceleration in climb, 200
Accelerations, moving axes, 380
 referred to fixed space, 379
Activity factor for propeller, 150, 151
Advance ratio for propeller, 146, 147, 148
Adverse yawing moments, due to lateral control, 331
 due to rolling, 331
Aerodynamic center, 45, 48, 49, 50
 definition of, 213
 determination of, for three-dimensional wing, 87
Aerodynamic forces, components of, 215
Aileron, types of balance, 367
Aileron effectiveness, 358
Aileron performance criterion, definition of, 355
 estimation of, 357
Aileron performance of various airplanes, 366
Aileron power, definitions of, 358
 estimation of, by strip integration, 353
 from spanwise loading, 357
Aileron response factor, 362
Air, physical properties of, 475
Air turbulence, 19
Airfoil, center of pressure, 45, 47, 48
 forces and moments acting on, 50
 geometry of NACA sections, 50, 51
 leading edge radius, 52
 NACA 4-digit series notation, 51, 52
 NACA 5-digit series notation, 52, 53
 NACA 6-digit series notation, 53, 54
 NACA basic thickness forms, 57
 NACA mean line pressure distribution, 58
 pressure distribution about NACA sections, 55, 56, 57, 58, 59, 60, 61
 section notation, 45
 section or two-dimensional characteristics, 44, 45, 46
Airfoil, section or two-dimensional stalling characteristics, 68, 69
 summary of section data, 484
 two-dimensional high-speed drag data, 66
 two-dimensional high-speed lift data, 64
Airfoil selection, based on section or two-dimensional characteristics, 68, 69
Airfoil shape, 20
Airplane, axis system, 4, 5, 376, 420
 center of gravity, 4
 degree of freedom, 4
 symmetric, 5
 asymmetric, 5
 fundamental performance parameters, 168, 171
 in equilibrium in various attitudes of flight, 156
 plane of symmetry, 5
Airplane efficiency factor, 93, 95
Airplane flying qualities, 9
Airplane relative density, 390
Airplane speed, 8
Altimeter, 478, 480
Angle, of attack, definition of, 7, 18
 effective, 24, 26, 27, 28
 for zero lift, 65
 induced, 24, 25, 26, 27, 28
 of bank, effect of, on airplane performance, 201, 202, 203
 for airplane in equilibrium flight, 156
 of sideslip, definition of, 11
 of zero lift, determination of, for three-dimensional wing, 86, 87
Angular velocities, in pull-ups, 301
 in steady turns, 302
 nomenclature, 4
Aspect ratio, 25, 70
 infinite, 27
Asymmetric power, 332
Atmosphere, characteristics of, 475
Axes systems, body, 382

- Axes systems, Eulerian, 378
 wind, 382
- Bernoulli's principle, 14, 16, 33
- Bobweights, 293
- Boundary layer, laminar, 30, 31, 36, 39
 notation, 31, 35
 on flat plate, 35, 36
 Prandtl theory, 30, 31
 pressure gradient in, 34
 removal of, 38
 stability of, 44
 turbulent, 30, 31, 37, 39
 velocity gradient in, 31
- Boundary-layer bleed for turbojet installation, 128, 129
- Boundary-layer control, effect on tip stall, 77
- Breguet endurance equation, 188, 191
- Breguet range equation, 185, 186, 191, 192
- Buffet boundary, 64, 65
- Ceiling, absolute, definition of, 161
 service, definition of, 161
- Center of gravity, critical fore and aft limits on, 247, 254, 294, 311
 effect on stability, of longitudinal shift in, 217
 of vertical shift in, 218
 summation of moments about, 10
- Centrifugal force for airplane in steady turn, 156, 203
- Chord, definition of, 18
- Chordwise force, 214
- Circulation, wing lift theory, 22
- Civil Aeronautics Authority, regulations affecting airplane design, 206, 207
- Climb and descent, generalized performance method for computation of, 175, 178, 181, 182, 183
- Climb distance, during take-off over obstacle, 196, 197
- Coefficient of friction for calculation of ground run, 195, 196
- Compound engine, general description of, 136
- Compressibility, 41
- Control surface balance, by set-back hinge line, 273
 types of, 277
- Cooling drag, determination of, for reciprocating engine, 140, 141
- Cowl-flap drag, 141
- Critical Mach number, as defined for compressibility corrections to speed, 172
- Critical take-off speed, 333
- Damping, aileron, 467
 directional, 428
 elevator, 395
 in roll, 351, 356
 longitudinal, 303, 394
 rudder, 461
- Density altitude, 478, 480
- Density ratio, 478
- Design parameters, discussion of, 204, 205, 206, 207
- Dihedral, definition of, 71
- Dihedral angle, wing, 343
- Dihedral effect, definition of, 341
 desirable limits on, 349
 effect of flaps and power on, 347
 influence of wing sweep on, 347
 interference effects on, 346
 variation of, with wing dihedral, 343
- Dimensional analysis, 14, 15, 16, 17, 18, 19, 20
- Directional control, estimation of power of, 329
 requirements, 327
- Directional stability, 12
 desirable limits on, 326
 fuselage influence on, 319
 interference effects on, 320, 324
 propeller influence on, 321
 rudder fixed, definitions of, 315
 rudder free, 334
 vertical tail contribution to, 323
 wing contribution to, 318
- Dive brake, description of, 83
- Dorsal fin, 337
- Downsprung, 293
- Downwash, angle of, 220
 field about wing, 221
 rate of change of, with angle of attack, 222

- Downwash, wing lift theory, 22, 23, 24
- Drag, 9, 17, 18, 20, 47
 departure from parabolic variation of, 157
 effect of fineness ratio on, 97
 for fuselage in transonic speed region, 105
 form, 14
 frictional, 14, 34
 induced, 34
 of landing gear and flaps, 96
 parabolic variation of, 155
 parasite, 34
 pressure, 14, 34
 profile, 14
- Drag coefficient, 8, 18, 20, 21
 based on equivalent parasite area, 94
 based on proper area, 95
 corrected for compressibility effects, 172
 for nacelle due to cooling drag, 141, 142
 incompressible, 98, 100
 induced, 34, 93, 94, 164
 minimum, 45
 minimum equivalent parasite, 164
 minimum profile, 67
 parabolic variation of, 93, 94
 parasite, 34, 91, 93
 peak rise in transonic speed region, 104, 105
 proper, 34, 35, 39
- Drag estimation, determination of, from wetted area chart, 96, 98
 for swept wings in transonic speed region, 103
 from drag breakdown, 91, 93
 in transonic speed region, 97, 98, 99, 100, 101, 102, 103, 104
- Drag rise due to compressibility, 99, 100, 101
- Ducted fan, general characteristics of, 131, 132, 133
 propulsive efficiency comparison with turbojet and turboprop, 133
 schematic sketch of components, 133
 typical performance example, 134, 135
- Dynamic pressure, 8
- Dynamic stability, 12
- Dynamic stability, definition of, 6
 lateral, ailerons free, 465
 controls fixed, 426
 rudder free, 458
 longitudinal, controls fixed, 400
 controls free, 407
- Effective wing loading, effect on maximum range altitude for performance of jet airplane, 191, 193
 relationship with Mach number, 63, 64
- Efficiency factor for airplane, 93, 95
- Elevator, angle to trim versus lift coefficient, 251
 definition of, 249
 evaluation of power of, 250
 floating characteristics, 272
 landing requirement, 256
 rate derivatives, 394
- Elevator angle per g , development of, 304
 effect on, of altitude, 306
 of c.g. shift, 305
 of velocity, 305
- Endurance, classical determination of, by Breguet method, 188, 191
 performance computation of, for reciprocating-engine airplane, 183, 184
- Endurance chart, for reciprocating-engine airplanes, 188
 for turbojet airplanes, 190
- Equation of state, 476, 480
- Equations of motion, lateral, 425
 longitudinal, 392
- Equilibrium, definition of, 6
- Equilibrium equation, steady rectilinear flight, 230, 249
- Equivalent parasite area as it affects design performance, 204
- Equivalent shaft horsepower, definition of, 142
- Flap, effect of, on aerodynamic characteristics, 79, 80, 81
 on glide path angle, 82
- Flap deflection, effect of, on section moments, 259

- Flat plate, for laminar flow, 36, 38
 for transition flow, 37, 38
 for turbulent flow, 37, 38
 skin friction coefficient of, for laminar flow, 36, 38
- Flight, subsonic, 43, 44
 supersonic, 43, 44
 transonic, 43, 44
- Flight boundary as performance limitation, 191
- Flight path angle, 7
- Flow, about bluff body, 32
 about streamline body, 32
 compressible, 40, 41
 separation, 33, 34, 38, 39, 40
 supersonic, 42
- Fluid, compressible, 14
 ideal, 14
 perfect, 14
 real, 14
 viscous, 14
- Force, buoyant, 16
 elastic, 16, 20
 friction, 14
 gravity, 16
 inertia, 16, 20
 normal, 14
 pressure, 14, 16
 shear, 14
 surface tension, 16
 tangential, 14
 viscosity, 16
- Frise ailerons, 368
- Fuel consumption, comparison of basic types of power plants, 119
- Fundamental units, length, 15
 mass, 15
 time, 15
- Gross thrust, definition of, 126
- Ground effect, on slope of lift curve, 257
 on wing downwash, 256
- Heaviside's expansion theorem, 438
- Hinge moment coefficient, definition of, 271
 variation of, with angle of attack, 270
 with control deflection, 271
- Hinge moment parameters, correction of, for three-dimensional flow, 277
- Hinge moment parameters, definition of, 272
 estimation of, from section characteristics, 275
- Hinge moments, definition of, 268
- Homogeneity, dimensional, 16
- Horizontal tail area, 10
- Ideal efficiency, comparison with propulsive efficiency for propeller, 144
 definition of, 142, 143
- Incidence setting, of tail, 214
 of wing, 214
- Induced drag, 21, 22, 24, 25, 26
- Induced drag coefficient, 24, 25, 27
- Intake ducts, flush, 128
 nose, 128
 scoop, 128
- International standard atmosphere, 476
- Ionosphere, 475
- Jet moments, due to inflow into jet blast, 243
 due to normal force at duct inlet, 244
 due to thrust, 243
- Kinematic viscosity, 16
- Lag of downwash, 393
- Landing distance, chart for calculation of, 199
 determination of air and ground distance, 197, 198, 199
- Lateral control, 350
- Lift, definition of, 8, 9, 17, 18, 19, 20
- Lift coefficient, additional, 56, 57, 58, 59
 effect of, on wing stall, 74
 basic, effect of, on wing stall, 74
 definition of, 18, 19
 determination of optimum, 110
 effect of, on pitching moment coefficient, 48, 49
 on stalling speed, 78
 equilibrium, 9
 for maximum lift to drag ratio, 110
 for minimum ground run, 195, 196
 minimum, 68
 optimum, 45

- Lift coefficient, optimum, for maximum range at supersonic speed, 193
 typical experimental representation of, 20, 21
- Lift curve, slope of, 27, 28, 29
- Lift distribution, calculation of, for two- and three-dimensional flow, 72, 73
 cut-out effect on, 78
 effect, of elliptical on induced drag and angle of attack, 73, 74
 on wing stall, 74, 75
 elliptic, 25
- Lift to drag ratio, for airfoil selection, 68
 for typical aerodynamic bodies at supersonic speeds, 110, 111
 in range determination, 185, 186, 191, 194
- Longitudinal modes of motion, 400
- Mach angle, 42, 43
- Mach number, critical, 60, 61, 62
 definition of, 19, 20
 determination of from pressure distribution data, 61, 62, 63
- Mach wave, 42, 43
- Maneuvering flight, definitions of, 298
- Maneuver point, stick fixed, 300
- Maximum speed, 9
- Mean aerodynamic chord, 10, 45, 213
 determination of, 89, 90, 92
- Modes of motion, definitions of, 374, 398
 lateral, 430, 458, 468
 longitudinal, 401, 407
- Modulus of elasticity, 40, 41
- Moment, about airplane's axis system, 4
 definition of, 18
 measurement in wind tunnel, 47
 about center of gravity, 7
- Moment coefficient, about aerodynamic center, 45, 48, 49, 50, 65, 87, 88, 89
 definition of, 18, 21
 determination of, for three-dimensional wing, 87, 88, 89
- Moments of momentum, referred to fixed space, 380
- Net thrust, definition of, 126
- Neutral point, stick fixed, definitions of, 230
- Neutral point, stick fixed, with power on, 241
 with propeller off, 231
 with propellers windmilling, 241
 stick free, 284
 flight determination of, 291
- Normal force, of propeller, 232
 wing, 214
- Operating cost, selection of design variables for minimum, 206, 207
- Over-all efficiency, definition of, 116, 117
- Pedal force, function of directional stability, stick free, 335
 variation of, with steady sideslip, 335
- Performance, calculation of, for steady turn condition, 201, 202, 203
 design requirements for optimum value of, 205, 206, 207, 208
 discussion of design variables, 204, 205, 206, 207
 endurance computation, 183, 184
 fundamental parameters affecting, 157
 generalized computation for rate and angle of climb and descent, 175, 178, 181, 182, 183
 generalized method of, 168
 landing distance, 197, 198, 199
 maximum range and endurance conditions for reciprocating-engine airplane, 184
 maximum rate of climb, 167
 minimum rate of sink, 167
 outline of general procedure for calculating, 155
 range computation, 183, 184
 rate of climb, 156, 159, 161
 rate of sink, 156, 159
 summary of performance items for turbojet airplane, 161
 take-off distance, 195, 196, 197
 time to climb, 159, 160, 161
 time to descend, 161
 turning, 156
- Physical quantities, derived, 15, 16, 17
 fundamental, 15, 17

- Pitch angle, 7
- Pitching moment coefficient, 215
 due to pitching velocity, 394
 variation of, with lift coefficient, 216
- Potential flow, 21
- Power, available, 163
 variation of, with altitude, 165, 166
 required, at speed for maximum lift to drag ratio, 164, 170
 effective induced, 163
 for airplane at various angles of bank, 202
 generalized curve, 170
 parasite, 163
 variation of, with altitude, 165, 166
- Power coefficient for propeller, 147, 148
- Power-plant efficiency, of ramjet, 116, 117
 of reciprocating engine, 116, 117
 of rocket, 116, 117
 of turbojet, 116, 117
 of turboprop, 116, 117
 over-all, definition of, 116
- Power-plant selection, 140
- Pressure altitude, 478, 480
- Pressure coefficient, 55, 56, 57, 58, 59
 critical, 60, 61
 Glauert relationship, 60
 Karman-Tsien relationship, 61
- Pressure ratio, 478
 for turbojet, 125
 for turboprop, 130, 131
- Propeller, blade-element analysis, 145, 146
 derivation of non-dimensional parameters, 146, 147
 downwash, 237
 for high-speed airplanes, 151
 momentum analysis of efficiency, 143
 normal force due to, 232
 slipstream velocity due to, 238
- Propeller charts, 149, 150
- Propeller design, 151, 152
- Proper area, determination of, 94
 frontal, 35
 wetted, 35
- Propulsion, comparison of basic types of power plants, 118
- Propulsive efficiency, comparison of basic types of power plants, 121
 compressibility correction for propeller charts, 151
 definition for use in propeller charts, 144, 145
 definition of, 117
 determination of, from propeller charts, 152
 for propellers, 143, 144, 145, 146
 for range computation, 183, 184, 185, 186
- Pull-out flap, 83
- Pull-ups, 299
- Pulse jet, general description of, 122
- Radius of turn, determination of minimum values of, 202, 203
- Ram drag, definition of, 126
- Ram efficiency, definition of, 127, 128
 variation of turbojet performance characteristics with, 128
 variation with inlet velocity ratio, 128, 129
- Ramjet, air to fuel ratio of, 127
 general characteristics of, 122, 123
 propulsive efficiency of, 123
 thermal efficiency of, 122
- Range, 9
 as affected by change in weight, 205, 206
 at supersonic speeds, 193, 194
 classical determination of, by Breguet method, 185, 186, 191, 192
 effect of wind on, 184, 185
 fundamental variables affecting performance, 193, 194
 graphical solution of, 187
 for reciprocating-engine airplane, 184
 for turbojet airplane, 189
 performance computation of, for reciprocating-engine airplane, 183, 184, 195
 for rocket or ramjet airplane, 193, 194
 for turboprop airplane, 193
- Range chart, for reciprocating-engine airplanes, 187

- Range chart, for turbojet airplanes, 192
- Rate, of climb, 8, 9
 effect of angle of climb on, 200, 201
 for accelerated flight, 200, 201
 of sink, 82
- Reciprocating engine, general characteristics of, 135, 136
 propulsive efficiency of, 136
 thermal efficiency of, 136
 typical engine performance curves, 137, 138, 139
- Response, to elevator control, 412
 effect on, of airplane damping, 416
 of stability margin, 414
 to lateral controls, 433
 including effects of adverse yaw, 446
 one degree of freedom, 434
 three degrees of freedom, 442
 two degrees of freedom, 439

parasite, 156, 157
variation with altitude, 158, 159
- Thrust coefficient for propeller, 147, 148
- Thrust loading, effect of, on airplane design, 206, 207
- Time, in turn, determination of, 203
to climb, 9
- Tip shape, 71
- Tip stall, 75, 76, 77
- Troposphere, 475
density variation, 478
with pressure ratio in, 478
height of, 476
pressure variation in, 477
temperature in, 476
- Turbojet, air to fuel ratio of, 127
derivation of non-dimensional performance parameters, 124, 125, 126
general characteristics of, 123, 124

- Turbojet, performance of Nene engine, 124
 propulsive efficiency of, 123
 ram efficiency of, 127, 128
 schematic sketch of components, 125
 thermal efficiency of, 123
 typical non-dimensional engine characteristics, 126, 127
 typical performance example, 126, 127
- Turboprop, general characteristics of, 129
 non-dimensional performance characteristics, 130, 131
 propulsive efficiency of, 130
 thermal efficiency of, 130
 typical performance characteristics for, 132
- Turning performance, calculation of, 201, 202, 203
- Twist, definition of, 71
- Two-control turns, 452
- Upwash, 222, 227
- Useful load, 140
- Velocity profile, 15
- Vertical tail, definitions of, 323
 slope of lift curve, 324
- Viscosity, coefficient of, 15
- Viscous fluid, 29
- Vortex systems, Prandtl, 22
- Wave angle, 43
- Wave drag, comparison of two- and three-dimensional bodies, 108
- Weight control, effect of, on design performance, 204, 205, 206
- Weight ratio in range determination, 185, 186, 187, 191, 194
- Wetted area chart, 96, 98
- Wing, planform characteristics, 69, 70, 71
 three-dimensional data, 84
- Wing area, 8
- Wing characteristics, at supersonic speed, 106
 comparison between straight and swept wing, 95
- Wing loading, as it affects airplane design, 206, 207
 effective, 63
- Yaw, 316
- Yawing moment coefficient, definition of, 317
 variation of, with angle of yaw, 318
 with rolling velocity, 429
 with rudder angle, 329
 with rudder rates, 461
 with yawing velocity, 428
